

GATSO wins European tender section control A2 highway

Haarlem, 10th of November 2011 – On the 1st of November, GATSO and the Traffic Enforcement Team of the National Public Prosecutor's Office signed the contract for a new section control system on one of the directions of the A2 highway in the Netherlands. GATSO will be responsible for both the installation and maintenance.

The system for speed enforcement will be implemented on the A2 highway between Amsterdam and Utrecht, the most important connection between the North and the South of the Netherlands. The administration and maintenance will be taken care of by GATSO for a period of 8 years. Q-Free Netherlands BV provisions, as sub-contractor, the license plate recognition software.

"We are very proud that the Traffic Enforcement Team, a valued GATSO customer for many years, has chosen the GATSO solution," commented Timo Gatsonides, Managing Director of GATSO. "We will deliver an effective system for automatic traffic enforcement on a highway with five lanes and two hard shoulders."

Willebrord Freijssen, Director of the Traffic Enforcement Team of the National Public Prosecutor's Office, added "Section control on the A2 highway must contribute to achieving the environmental standards set and further improve the traffic safety on this important highway in the Netherlands. The order was assigned to GATSO after a European tender procedure in which GATSO realized an excellent score".

About GATSO

Founded by champion rally driver, Maurice Gatsonides in 1958, GATSO delivers traffic enforcement solutions around the world. From design and manufacturing, to installation and operation. Fifty years after the world's first speed measuring device was introduced, GATSO is still the leader in speed and red light enforcement. The company has implemented projects in more than 60 countries and delivered 45,000 systems around the world. For more information go to www.gatso.com.

Q-Free

Q-Free Netherlands BV, with a primary focus on the development of technical recognition software for the traffic and transport market, operates as sub-contractor in this project. Q-Free Netherlands BV is part of Q-Free, a worldwide solutions provider of 'road user charging' and 'traffic surveillance' solutions. For more information go to www.q-free.com.
