Press Release

## The City of Oak Forest Police Department, IL selects GATSO USA for its Red Light Camera Photo Enforcement Program

Beverly, MA. (November 30, 2007) – The City of Oak Forest Police Department, IL has signed an agreement with GATSO USA to supply the city with a Red Light Camera Photo Enforcement Solution for designated intersections within the City of Oak Forest. GATSO USA's Red Light Camera Photo Enforcement Solutions will assist the City of Oak Forest in their traffic safety efforts to reduce traffic accidents and red light violations in the city.

“More people are injured in crashes involving red light running than in any other crash type. The ultimate goal of red light cameras is to reduce the number of accidents at signalized intersections. The Oak Forest Police Department together with GATSO USA is committed to accomplishing that goal,” said Chief Dennis Olszewski.

Several months ago the City of Oak Forest began an evaluation of Red Light Camera Photo Enforcement Solution providers. The city evaluated five companies in the process. “We decided upon red light cameras as a solution to reducing traffic accidents in our busiest intersections and chose GATSO USA not only because of their longevity in the industry, but their up to date technology such as having all data superimposed on the captured image. What really impressed me was their Amber Alert feature. To have a constant eye watching out for one particular vehicle is a priceless tool,” said Deputy Chief David DeMarco.

GATSO USA's Red Light Camera Photo Enforcement Solution will help the City of Oak Forest, Illinois with a population of approximately 29,000 residents reduce red light related traffic accidents and violations through the city's red light camera initiative.

GATSO USA is a leader in Red Light and Speed Camera Photo Enforcement Solutions based in Beverly, Massachusetts with offices in Arizona and Illinois. For the past 50 years, GATSO engineers, scientists and photographic experts have created the world's most sophisticated traffic enforcement systems that are used by agencies in over 60 countries around the world.
